PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience building production-oriented REST APIs using FastAPI and Python. Designed and delivered a multi-role enterprise backend system with JWT authentication, role-based access control, file parsing pipelines, SQL database design, and SMTP notification workflows. Experienced with SQLAlchemy ORM, relational database schema design, and RESTful API architecture. Seeking a Junior Python Backend Developer role where I can build real systems and grow toward backend and AI engineering.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript (basic)

Backend Frameworks: FastAPI, Flask APIs and Authentication: REST API design, JWT authentication, bcrypt password hashing, Passlib, SMTP integration, role-based access control

Databases: PostgreSQL, MySQL, SQL Server, SQLAlchemy ORM, schema design, query optimization

Python Libraries: Pydantic, pdfplumber, python-docx, Pandas, python-multipart

Developer Tools: Git, GitHub, Linux, VS Code, Postman, Swagger UI

Core Concepts: OOP, API security, backend architecture, data modeling, file processing, ETL fundamentals

PROJECTS

[Resume Review Workflow System](#) | FastAPI · Python · SQL Server · SQLAlchemy · JWT · React · TailwindCSS | github.com/Paul-Meshach/resume-review-system

- Designed and built a modular FastAPI backend with five router domains (auth, resumes, team leads, reviews, notifications) serving a React frontend; implemented stateless JWT authentication with role-based access control for Admin and Team Lead roles.
- Engineered a multi-format file parsing pipeline using pdfplumber and python-docx to extract candidate data from PDF and DOCX uploads; handled multipart file uploads with UUID-based filename sanitization to prevent path traversal.
- Designed a normalized SQL Server schema across four tables (users, candidates, reviews, notifications) with foreign key relationships; implemented magic link tokens with 72-hour expiry for secure tokenless Team Lead review access.
- Built an SMTP-based email notification system using Gmail TLS delivering HTML emails with resume attachments and magic review links; implemented real-time in-app notification center with unread badge tracking.

Zomato Analytics Pro – Food Ordering & Analytics System | Flask · Python · MySQL · Pandas · Matplotlib | github.com/Paul-Meshach/Zomato_Analytics_Pro

- Built a Flask backend API serving a food ordering system with MySQL persistence; designed a normalized relational schema across four tables (users, menu_items, orders, order_items) with foreign key relationships.
- Wrote 15+ SQL queries using JOINS, GROUP BY, and aggregate functions (SUM) for revenue calculation and top-item analysis; exposed results as JSON API endpoints consumed by the frontend.
- Processed and aggregated 500+ order records using Pandas; generated revenue trend analysis and Matplotlib visualizations served as dynamic chart endpoints.

Retail Sales Intelligence Pipeline | Python · MySQL · SQL · Pandas · Power BI | github.com/Paul-Meshach/retail-sales-intelligence

- Built an end-to-end data pipeline — CSV ingestion, Pandas-based transformation and cleaning, structured MySQL storage — to support downstream analytical queries.
- Implemented SQL window functions for period-over-period revenue comparisons and running totals; identified high-performing regions and seasonal demand patterns from transactional data.

WORK EXPERIENCE

Technical Data Entry Operator | Edusol Education Private Limited | Coimbatore |
Jun 2025 – Feb 2026

- Wrote Python scripts to automate data validation and consistency checks across student and revenue datasets, reducing manual correction effort in weekly reporting cycles.
- Built and maintained structured reporting workflows in Python and Excel; delivered weekly and monthly reports to operations teams with zero-error dataset handoffs.

Operations and Data Support Associate | Vandana Lakshmi Cotton Co. | Coimbatore |
Jan 2025 – May 2025

- Developed automated Python scripts to generate weekly sales summary reports from raw inventory data, replacing a manual process and reducing report generation time.
- Maintained and structured inventory and sales datasets; identified and corrected data inconsistencies before month-end reporting cycles.

EDUCATION

Bachelor of Engineering — Computer Science | PSNA College of Engineering and Technology, Dindigul |
Sep 2020 – May 2024 | CGPA: 8.3 / 10

Relevant coursework: Data Structures and Algorithms, Database Management Systems, Object-Oriented Programming, Operating Systems, Computer Networks

CERTIFICATIONS

- HackerRank SQL — Basic and Intermediate: Verified proficiency in JOINS, Window Functions, Subqueries, and Aggregations
- [HackerRank Python — Basic Certificate](#)
